

Product Requirements Document

Property Insurance Placement ERP

Project	Property Insurance Placement ERP (working title)
Client	Fiducial (Anila Mary S)
Vendor	Spirezen Enterprises (Hiral Patel)
Document version	v0.2 (Draft)
Date	05 October 2026
Status	Draft for client review

Version 0.2 is based on the IIB Code Master workbook, the Sookshma and Laghu add-on charts, and the four client workbooks received on 5 Oct 2026 (Data Sheet, RFQ, QCR, Placement Slip). Items still waiting on client answers are marked **[TBC]**. See document 07 for the analysis of the client formats.

1. Purpose and background

Fiducial places property (fire and allied perils) insurance for its clients. Today the workflow runs on Excel: a Data Sheet captures the risk, an RFQ goes to insurers, quotes come back and are compared in a QCR, and a Placement Slip records the chosen cover. Rates come from the IIB rate master (occupancy codes, pincode and earthquake zones), and add-on covers follow the Bharat Sookshma Udyam Suraksha and Bharat Laghu Udyam Suraksha schemes.

The business is a package placement, not fire alone: the client formats cover **14 coverage sections** (Fire, Burglary, Fire Floater, Burglary Floater, Fire Loss of Profit, Money, Fidelity, Plate Glass, Neon Sign, All Risk, EEI, Mechanical Breakdown, Boiler and Public Liability). The RFQ and QCR are built around **renewals** (existing policy versus three sum-insured options, up to five insurers), while the Data Sheet is for new proposals.

This product replaces the Excel chain with a single web-based ERP so that a risk is entered once, rated consistently from the master data, sent to insurers, compared, and placed, with a full audit trail.

2. Problem statement

- **Re-keying and version drift:** the same risk details are copied between the Data Sheet, RFQ, QCR and Placement Slip workbooks.
- **Manual rate lookup:** choosing the IIB rate, STFI minimum, and EQ rate means searching 299 occupancy codes and about 20,600 pincodes by hand.
- **Add-on complexity:** 15 add-on covers per scheme, each with its own limit and premium formula, differing between Sookshma and Laghu.
- **Slow, error-prone comparison:** insurer quotes arrive in different formats and are compared manually.
- **Comparison matrix:** a QCR compares up to 5 insurers across 14 sections and 3 sum-insured options, each with and without terrorism.
- **Four add-on catalogues:** BSUS/BLUS (15 paid and inbuilt covers), Fire additional (163), Property All Risk (125) and SFSP (185).
- **No central record:** quotes, decisions and renewals are scattered across mailboxes and files.

3. Goals and non-goals

Goals

- G1. Capture a risk once and reuse it across RFQ, QCR and Placement Slip.
- G2. Calculate indicative premium automatically from versioned IIB, pincode and add-on masters.
- G3. Generate RFQs and track responses from multiple insurers.
- G4. Produce the RFQ, QCR and Placement Slip in the client's existing Excel/PDF layouts (received 5 Oct 2026).
- G5. Keep a searchable history of every risk, quote and placement, with an audit trail.

Non-goals (initial release)

- Policy issuance, endorsements, accounting, invoicing and commission management (candidates for a later phase).
- Lines of business other than property/fire (marine, engineering, health, motor).
- Insurer-facing portal and direct API integration with insurers (RFQs go out by email in release 1).
- Client self-service portal (view-only portal is a later option).

4. Users and personas

Persona	Role	Main needs
Relationship / Account Manager	Owens the client	Create risk, send RFQ, review QCR, share placement slip with client.
Placement / Underwriting Executive	Handles insurer interaction	Prepare RFQ, chase quotes, enter quote terms, build QCR.
Operations / Admin	Maintains masters	Upload IIB/pincode updates, manage insurers, add-on terms, templates, users.
Manager / Approver	Reviews and signs off	Approve RFQs and placements, see pipeline and turnaround.
Client (external, later)	Insured	View quote comparison and approve placement.
Insurer (external, later)	Underwriter	Receive RFQ, submit quote through a portal.

5. Scope by release

Release	Scope
R1 (MVP)	Users and roles, masters (IIB, pincode, add-on catalogues, clauses, excess rules, insurers, clients), Data Sheet for all 14 sections, Fire rating engine, renewal comparison (existing vs options), RFQ generation and email, quote capture, QCR, Placement Slip, audit log, basic dashboard.
R2	Renewal reminders, document vault, bulk Excel import of risks, MIS reports, rate-master versioning UI, e-mail inbox linking.
R3 (options)	Client and insurer portals, insurer API/quote ingestion, policy and endorsement records, accounting hooks.

6. Core user journey

- 1. Account manager creates a client and a **risk** (location, pincode, occupancy, construction, sums insured by asset class).
- 2. System resolves occupancy to IIB rate, risk grade and risk type, and pincode to state, district and earthquake zone.
- 3. System recommends the product from sum insured (BSUS up to 5 Cr, BLUS above 5 Cr up to 50 Cr, SFSP above 50 Cr, PAR optional above 5 Cr) and lists its add-on covers.
- 4. User selects the coverage sections, sum-insured options, add-ons, clauses and excess; for Fire the system shows an indicative premium from the IIB master. Other sections are priced by insurers.
- 5. System generates the RFQ and emails it to selected insurers; responses are tracked.
- 6. Placement executive records each insurer's quote per section and option, with and without terrorism, plus terms and deviations.
- 7. System builds the QCR side by side; manager approves the recommendation.
- 8. System generates the Placement Slip for the selected insurer and stores everything against the risk.

7. Feature list and priority (MoSCoW)

Feature	Priority	Release
Login, roles, permissions	Must	R1
Master data import and maintenance (IIB, pincode, add-ons, insurers)	Must	R1
Client and risk (Data Sheet) capture with validation	Must	R1
14 coverage sections with annexures (plate glass, neon, all risk, EEI, MBD, boiler)	Must	R1
Add-on catalogues, clause library and excess rules	Must	R1
Renewal mode: existing policy vs 3 sum-insured options	Must	R1
Fire rating engine (IIB-based) with premium breakdown	Must	R1

Feature	Priority	Release
Add-on selection with scheme limits and caps	Must	R1
RFQ generation (Excel/PDF) and email	Must	R1
Quote capture and QCR	Must	R1
Placement Slip generation	Must	R1
Audit trail	Must	R1
Dashboard (pipeline, pending quotes)	Should	R1
Excel import of existing Data Sheets	Should	R2
Renewal reminders	Should	R2
Document vault	Should	R2
MIS reports	Could	R2
Client / insurer portals	Could	R3
Policy and endorsement records	Won't (now)	R3

8. Success metrics

Metric	Target (to be baselined with client)
Time from risk entry to RFQ sent	Reduce by at least 60% versus current Excel process
Rate lookup errors found in review	Zero for IIB/EQ lookups (system driven)
Time to produce QCR after last quote	Under 30 minutes
Share of placements with complete audit trail	100%
User adoption	All account and placement staff on the system within 4 weeks of go-live

9. Assumptions and dependencies

- Client supplied the four Excel formats on 5 Oct 2026; they are treated as the output templates. Client to confirm they are final.
- IIB master and add-on charts supplied on 30 Sep 2026 are the current source of truth; the master carries a 2019 rate year label.
- Premium shown is **indicative**; insurers' final quoted rates prevail.
- Client provides a business owner available for weekly reviews and UAT.
- Open questions are tracked in document 06; format analysis is in document 07.

10. Key risks

Risk	Impact	Mitigation
Scope wider than fire (14 sections, 4 add-on catalogues)	Effort and timeline grow	Fire rated by engine; other sections quote-driven; plan extended to 23 weeks.
Inconsistencies in the client formats	Wrong outputs	Format review in M0 (document 07); client confirms fixes.
Add-on premium formulas ambiguous	Wrong premium	Worked examples signed off by client before build.
Terrorism rate table not in master	Incomplete rating	Ask client for source; treat as manual input until provided.
Master data quality issues	Wrong lookups	Validation on import; client cleans flagged rows.
Insurer response formats vary	Slow quote entry	Manual quote form in R1; ingestion in R3.
