

Client Format Analysis and Field Mapping

Review of the Data Sheet, RFQ, QCR and Placement Slip workbooks

Project	Property Insurance Placement ERP (working title)
Client	Fiducial (Anila Mary S)
Vendor	Spirezen Enterprises (Hiral Patel)
Document version	v0.2 (Draft)
Date	05 October 2026
Status	Draft for client review

*Version 0.2 is based on the IIB Code Master workbook, the Sookshma and Laghu add-on charts, and the four client workbooks received on 5 Oct 2026 (Data Sheet, RFQ, QCR, Placement Slip). Items still waiting on client answers are marked **[TBC]**. See document 07 for the analysis of the client formats.*

1. Workbooks received (5 Oct 2026)

Workbook	Sheets	Purpose
Property Data Sheet	data sheet, Annexure	Risk capture for a new proposal (marked 'Ref: New proposal').
RFQ format	premium details, schedule, risk details, Fire-Additional Addon, Annexure, claim details, BSUS & BLUS-Addon, PAR-Addon, SFSP-Addon	Request for quote for the renewal of 2026-27, sent to insurers.
QCR format	premium details, schedule, risk details, Fire-additional add-on, Annexure, BSUS & BLUS-Addon, PAR-Addon, SFSP-Addon	Premium comparison for up to 5 insurers against the existing policy.
Placement Slip format	premium details, schedule, Annexure	Final placement for the selected insurer.

All four share one schedule layout (insured details, product choice, 14 coverage sections, clauses, warranties and excess) and one Annexure sheet. That shared structure means one data model can feed all four outputs.

2. Coverage section matrix

Y = present, - = absent. 'Premium' is the premium details sheet; 'Schedule' is the schedule sheet.

Section	Data Sheet	RFQ premium	QCR premium	RFQ / QCR schedule	Slip premium	Slip schedule
Fire	Y (as Fire and Burglary assets)	Y	Y	Y	Y	Y
Burglary	Y (as Fire and Burglary assets)	Y	Y	Y	Y	Y
Fire Floater	-	Y	Y	Y	Y	Y
Burglary Floater	-	Y	Y	Y	Y	Y
Fire Loss of Profit	Y	Y	Y	Y	-	Y
Money	Y	Y	Y	Y	-	Y
Fidelity Guarantee	Y	Y	Y	Y	-	Y
Plate Glass	Y	Y	Y	Y	-	Y
Neon / Glow Sign	Y	Y	Y	Y	-	Y
All Risk (portable electronics)	Y	Y	Y	Y	-	Y
EEL	Y	Y	Y	Y	-	Y
Mechanical Breakdown	Y	Y	Y	Y	-	Y
Boiler and Pressure Plant	Y	Y	Y	Y	-	Y
Public Liability	Y	Y	Y	Y	-	Y

The Placement Slip premium sheet lists only four sections, although its schedule covers all 14. This is raised as Q25 in document 06.

3. Findings and proposed handling

#	Finding	Proposed handling
F1	Scope is a package of 14 sections. The IIB master prices only Fire; no rate source exists for the other 13.	Engine rates Fire; other sections take insurer quotes (Q23).
F2	Product thresholds appear in the schedules: BSUS up to 5 Cr, BLUS above 5 Cr up to 50 Cr, SFSP above 50 Cr, PAR above 5 Cr. Excess tables go up to 1,500 Cr (SFSP) and above 2,500 Cr (PAR).	Store products and excess bands as master data (Q04).

#	Finding	Proposed handling
F3	RFQ and QCR are renewal documents: Existing Policy 2025-26 versus three sum-insured options, each with and without terrorism (RFQ) or by insurer (QCR, 5 insurers). The Data Sheet is for new proposals.	Support both modes; renewal mode loads existing policy data (Q24).
F4	Option labels are inconsistent: RFQ shows Option 1 (existing), Option 2 'Proposed Option 1', Option 3 'Proposed Option 3'; QCR shows Option 3 'Proposed Option 2'.	Use Existing, Proposed 1, Proposed 2 (Q26).
F5	GST is hard-coded at 18% (for example =C23*0.18) on every premium sheet.	Configurable tax rate with default 18% (Q27).
F6	Data Sheet 'Total sum insured' (E29) holds a typed 0, not a formula.	System computes totals.
F7	Data Sheet has no occupancy code, no separate pincode and no policy dates, but the rating and the schedule need them.	Add occupancy and pincode fields to the form (Q30).
F8	Risk details sheet (RFQ and QCR) says 'collected during Oct 22': stale sample data.	Treat as a template; capture risk details per location in the system.
F9	BSUS/BLUS add-on list differs from the chart wording (expediting, contamination, inadvertent omission) and has four placeholders ('some % on total sum insured').	Client to confirm one version (Q28).
F10	Four add-on catalogues: BSUS/BLUS (15 paid plus inbuilt), Fire additional (163), PAR (125), SFSP (185). Several items are shared across lists with small wording changes.	One catalogue table with product tags; export per product.
F11	Section order differs between RFQ (All Risk, EEI, MBD) and QCR (MBD, EEI, All Risk). Burglary first-loss options include 75% only on the slip.	Use one canonical order; confirm options (Q27).
F12	Typos in client text such as 'Standara Fire', 'Omission to insured', 'industrail'.	Keep wording editable in templates (Q31).
F13	Warranties, conditions and excess are marked 'Changes from one insurer to another'; QCR has a 'cheque in favour of' line.	Capture per insurer quote; include payee in QCR.
F14	Placement Slip premium has Capacity and two insurer columns.	Model shares per slip (Q25).

4. Field mapping: Data Sheet to system

Data Sheet field	System entity.field	Notes
Name of the Insured, GST No, Communication Address	client.name, client.gst, client.address	Reused on every output
Risk Location (more than one allowed)	location.address, location.pincode	Pincode added for zone lookup
Policy Period	risk.policy_period	Data Sheet says 1 year from date of payment
Nature of Business	risk.nature_of_business, location.occupancy_id	Occupancy code added for IIB lookup
Building 1, Building 2, compound wall, false ceiling, plinth, interior (sq ft, rate per sq ft, SI)	section_item (FIRE) with sq_ft, rate_per_sqft, amount	Amount = sq ft x rate unless typed
FFF, office equipment, electrical installations	section_item (FIRE)	
Plant and machinery: genset, compressor, transformer, other	section_item (FIRE)	
Stocks, third-party job-work stock, other items	section_item (FIRE)	Stock at higher value noted in the form
Hypothecation, stock in open space	risk.hypothecation, risk.open_stock_details	
Fire Loss of Profit: annual gross profit	risk_section (FLOP).total_si	12-month indemnity in clauses
Money: cash in safe, in transit single and annual	section_item (MONEY)	

Data Sheet field	System entity.field	Notes
Fidelity: employees, per-employee and per-policy limits	section_item (FIDELITY)	Per-event limit appears in RFQ schedule
Plate Glass, Neon, All Risk, EEI, MBD, Boiler (Annexure)	annexure_item	Quantity, dimensions, make and model, serial no, year, SI
Public Liability: any one accident, aggregate	section_item (PL)	
Risk features (fire fighting, age, construction, floors, electrical, claims, watch and ward, CCTV, shifts, basement, paint booth, plastic and rubber %, stock details)	location_risk_features	Same fields as RFQ risk details, per location

5. Output generation map

Output	Built from	Notes
Data Sheet	client, risk, location, section_item, annexure_item	Single-column sum insured
RFQ: premium details	existing_policy, risk_section options 0-2, insurer list	Premium columns left for insurers; GST rows computed
RFQ: schedule	risk, risk_section, add-on selections, clause, excess_rule	Three SI columns: existing, proposed 1, proposed 2
RFQ: risk details, claim details	location_risk_features, claim_history	Per location, last 3 years
RFQ / QCR: add-on sheets	addon_catalogue by product	Printed lists, selected items marked
QCR: premium details	quote_line for up to 5 insurers per option	With and without terrorism; net, GST, total
QCR: schedule	Same as RFQ plus quote_condition (warranties, excess)	Insurer-specific terms
Placement Slip	Approved quote, placement_share	'To be picked from QCR' fields filled automatically

6. Recommendations

- Use the client's own workbooks as export templates so merged cells, layout and wording are preserved; fill values and recompute formulas.
- Close findings F4, F7, F9 and F11 in M0 so the data model and templates are stable before build.
- Keep clause, warranty and add-on wording in editable admin tables rather than in code.
- Plan the Fire rating engine first; treat the other 13 sections as structured quote capture until the client names a rate source.
